

NITHEESH KUMAR REDDY MARAMREDDY

Memphis, TN | 901-335-9978 | nitheeshreddy980@gmail.com

DATA CENTER OPERATIONS TECHNICIAN | SERVER HARDWARE | LINUX | INFRASTRUCTURE TROUBLESHOOTING

PROFESSIONAL SUMMARY

Hands-on Technical Operator with current experience in rack-level and server-level testing, server hardware diagnostics, component replacement, power/network cabling, BIOS configuration, firmware flashing, and Jira-based defect tracking. Experienced in following TPIs, SOWs, blueprints, and test procedures; isolating hardware failures across RAM, storage, cabling, and system components; and escalating complex defects to engineering. Additional background in basic Linux troubleshooting, production validation, SQL, and Python.

TECHNICAL SKILLS

Server & Rack Hardware: Rack-level testing, server-level testing, rack-mounted systems, storage, RAM, hard drives, motherboards, hardware diagnostics, component replacement

Cabling & Validation: Power cabling, network cabling, diagnostic test equipment, functional/performance testing, thermal and burn-in stress testing

Systems & Operations: BIOS configuration, firmware flashing, basic Linux commands, file navigation, log review, Jira, defect tracking, root-cause escalation

Documentation: TPI/SOPs, SOWs, blueprints, technical drawings, test results, non-conformance documentation

Data & Automation: SQL, Python, Microsoft Excel

PROFESSIONAL EXPERIENCE

Technical Operator | Hyve Solutions | May 2026 - Present

- Perform rack-level and server-level testing on server systems and rack-mounted products, validating hardware functionality, connectivity, power, and readiness before handoff.
- Set up and prepare servers, storage units, circuits, and rack-mounted hardware; connect and verify power/network cabling and specialized diagnostic equipment.
- Execute functional, performance, pressure, thermal, and burn-in stress tests; use diagnostic utilities and automated validation scripts to detect hardware and system failures.
- Configure BIOS settings and flash firmware; diagnose failures involving RAM, hard drives/storage, cabling, loose connections, and other components, then rework or replace failed hardware and re-test.
- Interpret blueprints, diagrams, TPIs, and SOWs; create Jira tickets, document failures and corrective actions, and escalate complex non-conformance issues to engineering for root-cause analysis.

Software Test Engineer | Hana Tech LLC | Feb 2025 - Apr 2026

- Performed application and system testing across test and production-support environments using documented procedures and defined acceptance criteria.
- Used basic Linux commands for directory navigation, file handling, log review, and basic troubleshooting while investigating application and system issues.
- Executed functional, regression, smoke, integration, and UAT testing; reproduced defects, documented findings, supported post-deployment validation, and verified fixes with engineering teams using SQL and Excel where needed.

Data Analyst | Microgate Technologies Pvt. Ltd. | India | Feb 2020 - Jul 2022

- Supported high-volume production data workflows processing 5M+ transactions daily using Python and SQL; monitored automated ETL jobs and investigated processing failures.
- Optimized SQL queries using joins, indexing, and window functions, improving query performance by 40% and reducing execution bottlenecks.
- Automated operational reporting and validation tasks using Python and Microsoft Excel and maintained technical documentation for recurring workflows and issue resolution.

EDUCATION

Master of Science in Computer Science | University of Memphis

Bachelor of Science in Computer Science | Sreenidhi Institute of Science and Technology
